of it. All

Category: Ragnarok Online Advantage of the voice of the patient. An English tool. The aim of this study is to develop a tool to evaluate the quality of communication between health professionals and their patients. The tool was developed in a multicentre project involving cardiologists, gastroenterologists, general practitioners and communication teachers in seven different European countries. The first step in the development of the tool involved reading the existing literature and the opinions of experts. The main focus of the tool is the communication and the exchange of information between professionals and patients. Professionals have to assess the patient's language skills, listening skills and the understanding of the content. A survey was carried out among general practitioners, cardiologists, gastroenterologists, general surgeons, oncologists and psychotherapists. Face, content and construct validity were assessed. A pilot study was carried out with 50 interviews from six European countries. A consensus meeting was held to finalise the tool. The results of the pilot study showed that the tool has a good face and content validity. The most difficult question for professionals to answer is about the capacity of the patient to understand the information provided and the language skills required. To allow all professionals to complete the same process of assessment, a different range of answers can be chosen for each question. The tool has good construct validity and content and face validity. The tool is still in a preliminary phase. This article is the first description of a preliminary tool to evaluate the quality of communication between patients and their health professionals. The tool should be tested in further studies to assess its usefulness.

NEW YORK — With the sun in his eyes and a helmet obscuring his visage, one of the world's most notorious criminals was making a painfully slow crawl toward the finish line of a foot race. Just as things seemed to be going well, the nearly 80-year-old Lucchese crime boss Carlo Gambino nearly collapsed and fell over. With the crowd roaring, he continued to run, his face smeared with makeup, though he was clearly in distress. In the end, Gambino finished the six-mile race in four hours and 50 minutes, the longest time of any runner in the race to date. He won the event with ease, beating the previous record by more than two hours. "It's an honor to be among the best runners in the world," Gambino told the cheering crowd in Central Park. The race was a 50th- 2d92ce491b
