Q: How do I programmatically scroll to an element on a webpage? How do I programmatically scroll to a div containing a certain anchor tag? I have the anchor tag, but I do not know the ID of the div. A: well if your link is like: Product you could scroll to it like: var href = $("#yourLinkId").attr("href") $('html, body').animate({ scrollTop: $(href).offset().top }, 500); But in your case you could do: $(".yourDivClass").animate({ top: parseInt(jQuery("#theElement").offset().top) + yourWidth }, 500); Gas-phase sodium-hydrogen affinity: role of the oxygen molecule in stabilization of ion-ion complexes. Equilibrium constant estimates are reported for the gas-phase interaction between ions of Na and H2O. A large number of rate constants for H2O(+) and Na(+) are found by laser-molecular beam velocity-map ion-imaging (VMII) to lie in a narrow range of 0.54-0.78 × 10(4) M(-1) s(-1) for collision energy in the range of 40-100 kJ mol(-1) on the (1)Σ(+) electronic state of the Na(+) atom. The corresponding O2(+) + H2O(+) reactions are estimated to be significantly slower, with a rate constant in the range of ~1.3-2.4 × 10(-10) cm(3) s(-1). The discrepancies can be traced to the inclusion of either a vibrational mode localized in the H2O(+) ion at 4330 cm(-1), or to the second vibrational mode of the molecular hydrogen. Results from ab initio calculations are also presented. A simple model is proposed to describe the strong hydrogen-bonding interactions between Na(+) and H2O(+), the rate constants for which are also considered in light of the present experimental results.Q: How to create a new empty array and push values to it? How do I create an empty array and then push values to it? I am using jQuery and AngularJS. I need to store the values from the field in an array
