## **IMetrix Download**

iMetrix Torrent Download is a straightforward application that enables you to convert various kinds of measurement units, such as consumption, specific heat, heat conduction, acceleration, or flow. It contains approachable options and delivers results rapidly. Simple setup and UI After a fast setup procedure that shouldn't give you any trouble, you're welcomed by a plain and simple interface, made from a large window divided into multiple panes, corresponding to each type of unit conversion. Apart from the previously mentioned kinds of measurements, the utility offers support for length, frequency, area, volume, time, velocity, angle, mass, density, dynamic and kinematic viscosity, concentration (mass/mass, volume/volume, mole/volume), temperature, pressure, energy, force, power, and heat transfer. Convert between various measurement units All you have to do is enter the numerical value in any of the fields and click a button to make the instant calculation and find out its numerical counterpart in the remaining units. For example, when it comes to angles, you can enter values in seconds to find out results in minutes, degrees, quadrants or radians. It's possible to modify the default number of decimal places, as well as to switch to another language for the interface. Unfortunately, iMetrix doesn't come loaded with options for copying all displayed information to the Clipboard, printing it, or exporting it to file. Evaluation and conclusion Everything worked smoothly in our tests, thanks to the fact that the software program didn't freeze, crash or prompt error messages. As we expected, it didn't put a strain on the overall performance of the computer, running on low CPU and RAM. Tasks were carried out instantly. Taking into account its intuitive interface and options, iMetrix turns out to be a reliable tool that can be handled by all types of users who want to easily convert measurement units offline. iMetrix Description: iMetrix is a straightforward application that enables you to convert various kinds of measurement units, such as consumption, specific heat, heat conduction, acceleration, or flow. ## IMetrix With Keygen Download

Converts between several measurement units. Runs on Windows XP/Vista/7/8. Software Size: 38,6 MB Download: iMetrixQ: PHP Multiple input types I have an application with two views; one of which has the following HTML: " /> The other view has the following: " /> When a user clicks on the submit button, I'd like to check whether the input box is a telephone number or a text box. So I have: if(isset(\$\_POST['reg'])) { \$inputType = \$\_POST['phone']; // If type input = telephone if(!empty(\$inputType)) { \$phone = \$inputType; } } If the input type is a phone number, I want to ensure the input is a valid phone number. So I have: if(!empty(\$phone) && preg\_match("/^[0-9]{3}-[0-9]{3}-[0-9]{4}\$/", \$phone)) { Which is checking that the input is between 3 and 4 digits, and the total of the digits between 3 and 4 is between 11 and 13. My issue is that I don't know how to ensure the input is either a telephone number or a text box. It always falls into the text box part even though I am using isset to only check for telephone numbers. I've tried the following: if(isset(\$\_POST['reg'])) { \$inputType = isset(\$\_POST['phone'])? \$\_POST['phone'] : \$\_POST['text']; // If type input = telephone if(!empty(\$inputType)) {
