* **Flatten Image** : This tool only flattens the image, but it can be very useful if you want to add a clipping mask. Click the **Flatten Image** tool and choose **Clip**. The image will be flattened, just like a mask, but it will still appear when you view the image in layers, so the image can be filled with color. * **Layer Styles** : These tools allow you to draw rules for layers. If you want to draw straight lines in an image, you can do it by drawing a set of guidelines on an area of your image. Then you can apply _Layer Styles_ to these lines. In addition, you can add _Opacity Layers_, in which case all of the layers except the top one (visible layer) will have the opacity set to 0. This is used for creating effects in images. * **Navigator** : The Navigator tool lets you move around in an image. You can use it to select an area, then click different areas to see what is there. For example, if you're trying to move the Background layer behind some others, you can select the Background layer and move it using the Navigator. * **Undo** : Photoshop includes the standard **Undo** tool. If you click the arrow next to the Undo tool, you can see a small list of the actions you've taken. You can then see the image that is currently being modified (marked with a red button) and the image that was the previous version of the image. This is useful in case you want to reverse an effect you applied. Note that the history of your actions shows up here only after you've applied some previous edits, so you can start using Undo only after you start working. * **Transform** : This tool allows you to move an image around the X, Y, and Z axes (up, down, and left and right). You can use the edges of the image as a guide as you apply transformations. * **Window** : This tool creates a new window from which you can drag and drop objects, such as layers and selections. * **Paths** : These tools let you create straight and curvy paths in an image. You can use them to create brushes and art with outlines and backgrounds. * **Free Transform** : This tool lets you transform an image by using a set of
