Q: Is there a hack for the failwhale to be less odious? Is there a way to reduce the text of the failwhale to something more tolerable, or maybe a simple solution to stop seeing it at all, without deleting it? Obviously I can't bother with a flat out edit, but perhaps the failure to notice that it's in the image could just be notened, or the image that popups could be drawn on a mask (like the standard way to achieve a background image). A: The only way I can think of to make it more tolerable is to file a feature-request on SE to disable the entire page when a question fails to generate any up-votes, or at least to make the text less prominent and annoying. However, you have other options available to you. You can upvote the question yourself, which will "reset" the post's reputation and causes the question to become un-highlighted, thus not ruining the page. You can edit the question to add back a link to point to the more basic, less obnoxious close reason. A: Personally, I don't think this is particularly important. It's not something that I'm particularly offended by, nor is it something that I find makes me want to avoid the site. When a question receives a close vote, it's up to that voter to accept or reject the close vote, depending on the reasoning they cited for closing. If they don't like the style of a specific close reason, then they have the choice of leaving a comment under the close reason to explain why they reject the close. Obviously, this isn't a walk-in-the-park type of close vote, but it's up to the voters to explain why they are voting to close the question. Personally, I'm not interested in the event that a question received 10 upvotes before it received a single close vote. It makes no difference to me why the question received 10 upvotes before it was closed, or how any one close vote was cast. If 10 voters gave it 10 upvotes, so be it. If you think the question is on-topic, or has some redeeming quality, then upvote it. Personally, I wouldn't expect someone to click the "Not Constructive" close reason every time they flagged a question as off-topic. It would be the

Acid base chemistry Acid Base Chemistry is an important area of chemistry and can be studied through various sub-disciplines and application areas (acid-base chemistry, hydronium ion chemistry, amidolysis, etc.). Overview Acid Base Chemistry is the field that deals with the chemistry of acids and bases. Acid Base Chemistry, as a field of study, is usually sub-divided into three general disciplines: acid-base titration, acid-base chemistry, and molecular acid base chemistry. Acid-base titration can involve the study of basic titration (the solubility of an insoluble base) of various basic and acidic species (salt like ions, hydroxide ions, metal cations, other inorganic species) and the study of the relationships between concentration and activity of a solution of acids, bases and salts. Acid-Base Chemistry Acid-base chemistry, is a sub-discipline of chemistry that encompasses the study of the interconversion of acid and base species, the properties of acids and bases (titrating or dissolving the other), as well as ionization and non-ionic dissociation of acids and bases and their structural properties. Acid-base chemistry may be further subdivided into two sub-disciplines; acid-base equilibrium (or acid-base titration), and acid-base chemistry. Acid Base Chemistry and Acid-Base Titration Most of the time when people talk about acid base chemistry they are talking about the laboratory, or classroom, or kitchen, or barroom. It is the study of the acid-base titration of various acids and bases. Acid-base Titration is used in chemistry, medicine, food, pharmaceuticals, metallurgy, industrial processes, and many other areas. It is also a vital part of understanding just about any chemical reaction. The relationship between acid and base is vital in understanding a variety of chemical processes. Acid-base titration has applications in areas such as the assessment of the food industry, the utility of water, and the effects of buffering agents on the human body. Acid-base titration has also been used for many purposes, such as the determination of osmotic pressure in the body, the assay of heavy metals, the titration of the solubility of metal sulphides and the determination of the pH of a solution.
